OPINION ON THE SALT CAVE

The unique microclimate and aesthetic values, suitable relaxation music allow you to spend pleasant, full of rest and relaxation moments in the salt cave.-/-

The biggest advantage of staying in the salt cave is the fact that it is built of salt from the Dead Sea, which is saturated with the richness of minerals. The session spent in the salt cave enables you to breathe clean, fresh air rich in microelements, such as iodine, calcium, sodium, magnesium, iron, bromine, selenium.-/-

These elements help with the following ailments:-/-

- Diseases of the upper respiratory tract-/-
- Diseases of the lungs and bronchi-/-
- Gastrointestinal disorders-/-
- Diseases of the heart-/-
- Diseases of the nervous system-/-
- Dermatological diseases-/-

I would recommend the use of salt caves.-/-

-/-MEDICAL OPINION-/-

From the beginning of the creation of the Salt Cave in Kielce me and my patients benefit from its beneficial influence.-/-

There is a unique microclimate in the Salt Cave.-/-

The air is saturated with iodine and magnesium compounds, calcium, potassium, sodium, bromine, selenium and copper chlorides. This is a wealth of minerals and trace elements and maintaining a proper temperature and humidity is necessary for the proper functioning of the respiratory epithelium of the upper and lower respiratory tract.-/-

That is why I recommend for my young patients and adults the services of Salt Cave in adjuvant therapy after curing inflammation of the nose, sinuses, throat and larynx. As the most recommended also, the use of this microclimate for patients suffering from chronic tonsillitis, chronic hypertrophic and atrophic pharyngitis and laryngitis, chronic rhinitis, chronic sinusitis.-/-

As the Salt Cave is located in my city, the patients I treat can use its services throughout the year, without waiting for the holiday period, when you can go to the seaside.-/-

Currently, working as an ENT doctor, I cannot imagine treating patients, especially those suffering from chronic upper respiratory tract infection without supportive treatment, e.g. beneficial effects of sea salt.-/-

I would recommend the use of salt caves.-/-

[Below, there is a rectangular stamp with the doctor's details] Dorota Wrońska, MD, ENT Specialist, [address] Kielce, ul. Manifestu Lipcowego; [signature illegible]-/-
